

THE STONE

User Manual

A new way to create structure

UNDERSTANDING THE STONE

The Stone and the Stone Locks allow the building of all sorts of structures. But in order for them to be stable and safe, one must follow a few simple rules:

Choose your site carefully, it must be even and stable.

Plan your structure before building

Make sure your structure is well balanced and that there is not any danger for it (or a part of it) to collapse.

BUILD WITH THE STONE

Building with the Stone is easy, one just has to put a stone on top of another. By alternating the order of the pieces in your structure, you intertwine them, insuring a better stability and safety.

Warning !

If you fail to alternate the order of the pieces on a big surface, your structure is more likely to fall down

USING THE STONE LOCKS

fig.a. Top Stone Lock.

You may want to use the Stone Locks for many reasons:

- Public use of the Stone
- Big or unstable structure
- Safety and security concern

The Stone Locks are composed of three parts:

- A flexible rope
- Two pierced metallic triangles.

fig.a. Base Stone Lock.

USING THE STONE LOCKS

The Lock is a way to bound the Stone between them.
The use of the Stone Locks in 4 steps:

1. Attach the rope to one of the triangle knotting them with the help of the 3 metallic rods.
2. Insert the triangle in the hole of the first piece you want to bound, rod side facing the sky. Stretch the rope firmly and tie, the rod side facing the floor (fig.a.).
3. Pass the rope through the pieces you want to bound
4. Insert the second triangle in the last piece you want to bound, rod side facing the sky. Stretch the rope firmly and knot it to the second triangle (fig.b.).
